1. Introduction

The SD Formatter formats SD Memory Card, SDHC Memory Card and SDXC Memory Card (collectively SD/SDHC/SDXC Cards) complying with the SD File System Specification created by SD Card Association (SDA).

The SD Formatter formats SD/SDHC/SDXC Cards optimizing with these card's performance etc.. It is strongly recommended to use the SD Formatter to format SD/SDHC/SDXC Cards rather than using formatting tools provided with operating systems. In general, formatting tools provided with operating systems can format various storage media including SD/SDHC/SDXC Cards, but it may not be optimized for SD/SDHC/SDXC Cards and it may result in lower performance than using the SD Formatter.

SD/SDHC/SDXC Cards have "Protected Area" in the card for SD security function. The SD Formatter will not format the "Protected Area". Please use appropriate application software or SD host device which provides SD security function to format the "Protected Area" in the card.

2. System Requirements

2.1 Operating Systems

(1) For SD/SDHC Cards

- Windows 7
- Windows Vista
- Windows XP

(2) For SDXC Card

- Windows 7
- Windows Vista (SP1 or later)
It becomes available if you install SDXC driver. Software is available at the following Microsoft site:

<http://support.microsoft.com/kb/975823>

- Windows XP (SP2 or later) with the exFAT file system update (KB955704)
The exFAT file system update is available at the following Microsoft Download Center:
<http://www.microsoft.com/downloads/details.aspx?FamilyID=1cbe3906-ddd1-4ca2-b727-c2dff5e30f61&displaylang=en>

Note: SDXC Card on SD slot on PC may not work since SDXC drivers for Windows 7 and Windows XP are not available now.

2.2 SD Interface Devices

The following interface devices to access SD/SDHC/SDXC Card are available:

- SD slot on PC
- USB SD reader
- PC Card, CardBus or ExpressCard SD adapter

Please check your SD interface device is compatible with your SD, SDHC or SDXC Card before formatting.

3. Installation of SD Formatter

- (1) Close all application programs on your PC.
- (2) Execute the SD Formatter installation program which you downloaded from SDA website.
- (3) Follow the instructions from the SD Formatter installation program and complete the installation.

Note: If you have installed the SD Formatter already, you must uninstall the SD Formatter as described below, then install the SD Formatter again.

If "User Account Control" window is displayed on the screen during the installation, please click on [Allow].

4. Uninstallation of SD Formatter

4.1 Windows 7

- (1) Click on [Start] then click on [Control Panel].
- (2) Click on [Uninstall a program].
If View is "Big Icon" or "Small Icon", click on [Program and function].
- (3) Double click on [SD Formatter].
- (4) If confirmation window is displayed on the screen, click on [YES].
- (5) If "User Account Control" window is displayed on the screen, please click on [Continue].
- (6) Follow the instructions during the uninstallation of SD Formatter.

4.2 Windows Vista

- (1) Click on [Start] then click on [Control Panel].
In case of "Classic Start Menu", click on [Start] and point to [Settings], then click on [Control Panel].
- (2) Click on [Uninstall a program].
In case of "Classic View", click on [Program and Function].
- (3) Double click on [SD Formatter].
- (4) If confirmation window is displayed on the screen, click on [YES].
- (5) If "User Account Control" window is displayed on the screen, click on [Continue].
- (6) Follow the instructions during the uninstallation of SD Formatter.

4.3 Windows XP

- (1) Click on [Start] then click on Windows [Control Panel].
If you cannot find [Setting] and/or [Control Panel] from [Start] menu, click on [Start], then click on [My Computer] and [Change a setting] or [Control Panel] that exists on the left side of my computer menu.
- (2) Click on [Add or Remove Programs].
- (3) Select "SD Formatter" and click on [Change/Remove].
- (4) If confirmation window is displayed on the screen, click on [YES].
- (5) Follow the instructions during the uninstallation of SD Formatter.

5. Operation Guide

5.1 Description of SD Formatter Window

5.1.1 SD Formatter Main Window

When the SD Formatter is starting up, the following main window is shown on the screen. Formatting of SD/SDHC/SDXC Card is executed by clicking on the [Format] button in this window.

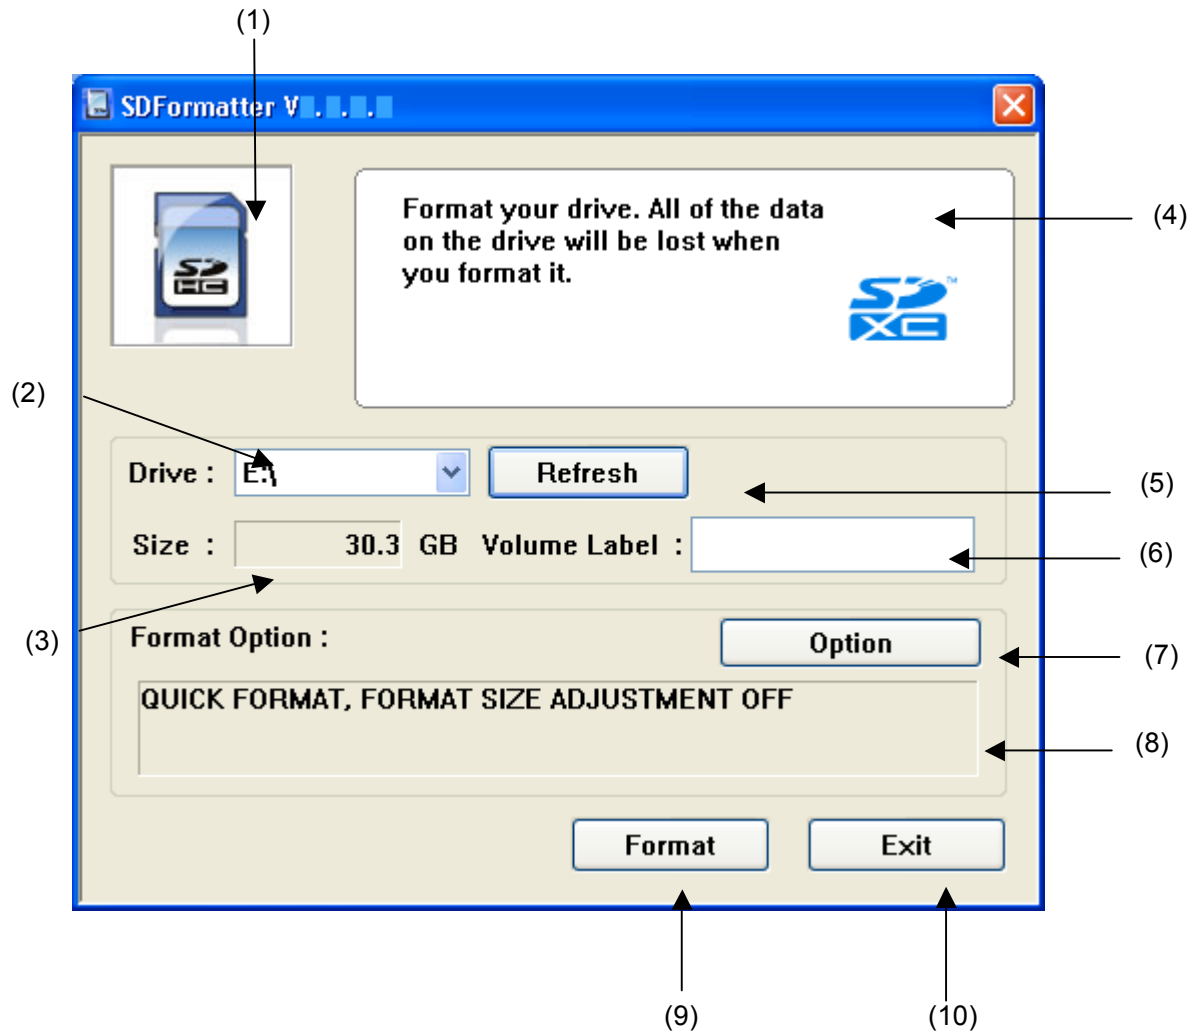

Figure 1: SD Formatter Main Window

(1) Status

This field indicates the status of SD/SDHC/SDXC Card and its interface device.

Blue: They are functional.

No Logo: Either SD/SDHC/SDXC Card or SD interface device is disabled.

Gray: They are disabled. It may be no SD/SDHC/SDXC Card is recognized by the SD Formatter.

(2) Drive

This list indicates drives of SD/SDHC/SDXC Cards recognized by the SD Formatter. A drive on this list can be selected for formatting the card.

(3) Size

This field indicates the capacity of SD/SDHC/SDXC Card on the selected drive.

(4) Message Area

This area shows messages or instructions to users.

(5) Refresh Button

This button is used to update the information of SD/SDHC/SDXC Card drives. When this button is clicked, the SD Formatter obtains the latest information of SD/SDHC/SDXC Card drives. Click this button when new SD/SDHC/SDXC Card is inserted to an SD interface device.

(6) Volume Label

This field is used to display volume label written in the card and enter new volume label to be written into the card during formatting. You can enter up to 11 characters in the Volume Label field. If volume label has been written in the card in other language except English, this field may not be shown correctly. In this case, you should enter new volume label.

(7) Option Button

This button is used to select options of the format operation. When this button is clicked, the format option window is displayed on the screen. Refer to 5.1.2 Format Option Windows for more information.

(8) Format Options

This area indicates the current format options selected in the Format Option Window.

(9) Format Button

This button starts the format operation. After clicking on this button, the confirmation window will be shown on the screen. You can continue or cancel the formatting.

(10) Exit Button

This button is used to terminate the SD Formatter.

5.1.2 Format Option Window

When [Option] button is clicked, the following Format Option Window is displayed on the screen. The following format options can be selected.

- Types of formatting operations
- Format Size Adjustment options

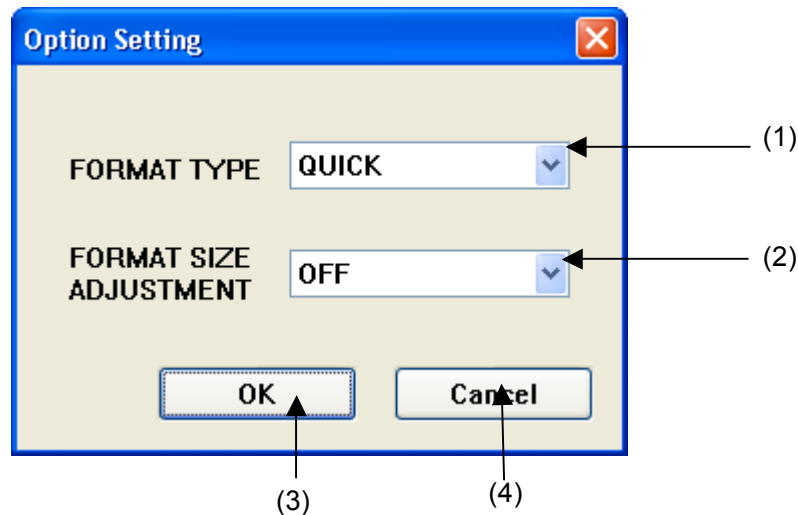

Figure 2: Format Option Window

(1) Types of formatting operations

The following types of formatting operations are shown on the list:

- QUICK
- QUICK (Erase ON)
- FULL (Erase OFF)
- FULL (Erase ON)

QUICK:

This option is a quick formatting and only initializes the file system parameters in the card, but not initializes user data area in your card. If you need to initialize user data area, use the other types of formatting operations shown below.

QUICK (Erase ON):

This option initializes the file system parameters and erases all user data area in your card. The erase operation is available if the "SD Secure API" function is implemented in your SD interface device, otherwise the erase operation will be skipped during formatting. This option may take long period for formatting depending on the capacity of the card.

FULL (Erase OFF):

This option initializes the file system parameters and completely deletes all user data area by overwriting meaningless data into the card. This option may take long period for formatting depending on the capacity of the card.

FULL (Erase ON):

This option initializes the file system parameters and completely deletes all user data area by overwriting meaningless data into the card. Furthermore, this option erases all user data area in the card.

The erase operation is available if the "SD Secure API" function is implemented in your SD interface device, otherwise the erase operation will be skipped during formatting.

This option may take long period for formatting depending on the capacity of card.

(2) Format Size Adjustment

If the formatted capacity of the card is not a multiple of capacity in a cylinder, some hosts may not access the card successfully. This option adjusts formatted capacity to a multiple of capacity in a cylinder.

OFF:

This option does not adjust the formatted capacity. Usually, this option should be selected.

ON:

This option adjusts the formatted capacity to a multiple of capacity in a cylinder. This option may reduce the formatted capacity.

This option should be used by specific users who encountered a trouble with formatted capacity.

(3) OK Button

This button applies the selected option and quits from the window.

(4) Cancel Button

This button is used to cancel the selected option and quits from the window.

5.2 Completing Formatting

When completing the formatting, the following window is shown on the screen with formatted information.

Figure 3: Window on Completing Formatting

5.3 Cancel Format Operation

You can cancel formatting operation during either "QUICK (Erase ON)", "FULL (Erase OFF)", or "FULL (Erase ON)" formatting.

- (1) Click on "Cancel" button during the formatting operation if you want to cancel it.

Figure 4: Cancel Formatting

- (2) If you cancel the formatting, user data will not be erased or overwritten, but the file system parameters are initialized as same as the QUICK formatting. The following window will be shown after cancelling the formatting.

Figure 5: After Cancel Formatting

5.4 SD Formatter Version Information

Click on the following SD Formatter Icon and select "About SD Formatter (A)" to display the version information.

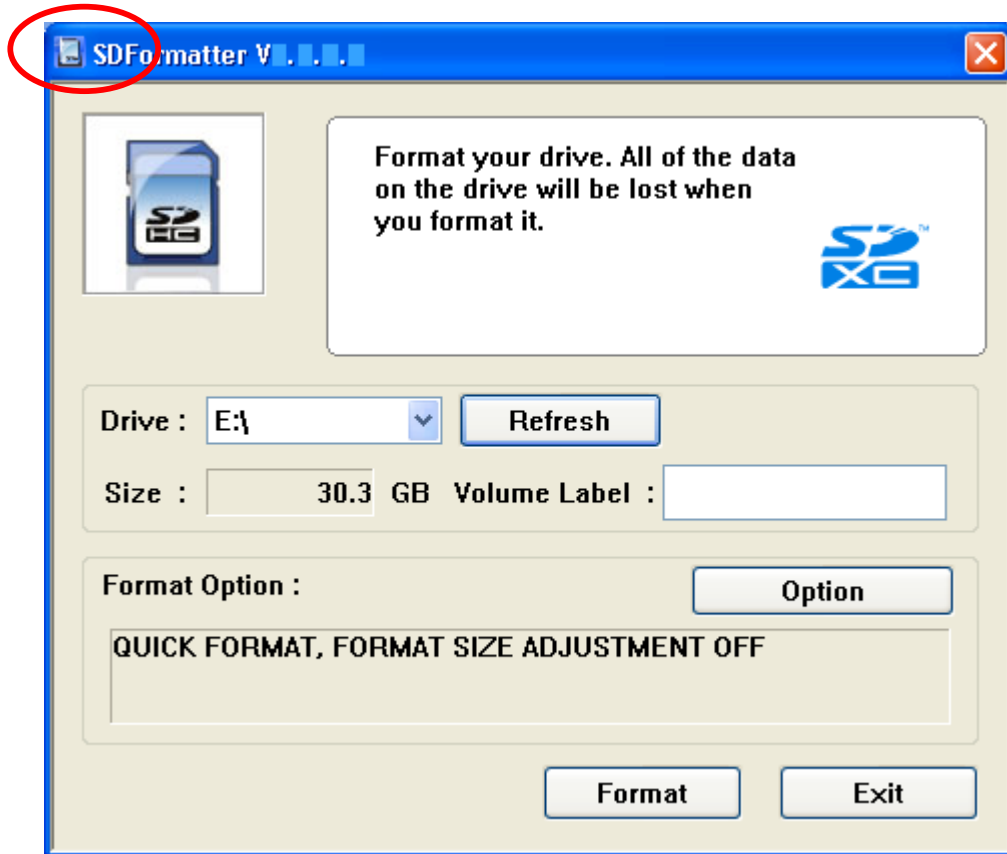

Figure 6: SD Formatter Icon

6. Important Notice

- (1) Do not format recordable media other than SD/SDHC/SDXC Cards using the SD Formatter. If you accidentally formatted a recordable media other than SD/SDHC/SDXC Cards, reformat the media using the appropriate formatting software which came with the media.
- (2) Do not remove the SD/SDHC/SDXC Cards while formatting.
- (3) SD Card shall be formatted with the FAT12 or FAT16, SDHC Card shall be formatted with the FAT32, and SDXC Card shall be formatted with the exFAT. If you format with the other file formats, the card will lose the interoperability with SD Host Devices such as digital still cameras.
- (4) Once formatting has started, all recorded information will be no longer available.
- (5) Check the position of write protect switch on your card before formatting. The position shall be on the NOT PROTECTED position.
- (6) If the SD Formatter does not recognize the SD/SDHC/SDXC Card, re-insert the card and click on "Refresh" button.
- (7) The SD Formatter does not format the protected area in the SD/SDHC/SDXC Cards. The protected area shall be formatted by appropriate PC application software or an SD host devices which provide SD security function.
- (8) If the SD/SDHC/SDXC Card cannot be recognized by the SD Formatter after the card is inserted into an SD interface device (SD slot on PC, USB SD reader or SD adapter), check the SD interface device is compatible with SD/SDHC/SDXC Card. Some of SD interface devices are interoperable only with SD Card or SDHC Card. And, Some PCs need to install drivers and file systems to work with SD/SDHC/SDXC Cards.
If your system is compatible with SD/SDHC/SDXC Cards but the card is not recognized, try to restart your PC and execute the SD Formatter again.
- (9) If you choose QUICK format option, file system parameters are formatted, however, prerecorded data in user data area in your card will not be deleted after formatting, and the prerecorded data may be retrieved by using special software. Please use ERASE or FULL formatting option if you want to delete the prerecorded data completely.
